SMART Data

SMART Data allows ITL customers to manage their data. Using SMART Data customers can:
- Add new issue notes
- Eliminate a fake note
- Create a new dataset
- Improve the performance of an existing dataset

SMART Data is a free software program that allows end users to manage their own data where ever they are in the world. SMARt Data allows ITL customers to update or create currency datasets for all Innovative Technology bank note validators. To register for a SMART Data account and access the software visit: **www.innovative-technology.co.uk/smartdata**

SMART Data was featured in the November 2011 Technical Bulletin please refer to this issue for full information.

Support Tools

From 1st March 2012 the DA2 & DA3 programming kits will be supplied without a CD. All dataset currency files and firmware files are available to download free from our website within the Technical Support Section and as such CDs will no longer be supplied.
